

# INSPIRATION NEEDLES COPPER COMPANY

## Capital Stock \$2,000,000.00

An extensive drilling campaign is in progress, which is expected to disclose satisfactory reserves in values and the company's cash position is especially strong.

The United Geological Survey, which throws some light on the mode of occurrence of the vast ore bodies of the Miami district, and the maps showing the working places, are available, and this information, together with knowledge gained at first hand by a study of the workings themselves where accessible, has been used to guide the development campaign now in progress on the Inspiration Needles.

It seems certain that only a little time must now elapse before a large tonnage of high-grade ore will be blocked out. There can be little doubt that Inspiration Needles is now on the eve of opening up just such an ore body as that disclosed in the Live Oak.

It may be said, without fear of contradiction and without desire to depreciate the value of other properties, that no other holding in the entire Miami district is more favorably situated than is the Inspiration Needles. This property is in the very heart of the Miami copper belt.
